SCANTIBODIES Laboratory, Inc.

A Global Presence...

Scantibodies Laboratory Inc. is a family-owned company started in 1976 and currently employing over 600 employees in 5 countries worldwide. We are GMP and ISO 9001/13485 certified. We have over 20 years experience in animal husbandry, ascites production, and antibody purification and currently operate separate mouse breeding facilities in three countries.

Tecate, Mexico Facility 175,000 square foot facility...

We have one of the world's largest vivariums and largest mouse colony in the world with over 200,000 mouse capacity, with a future expansion of 6 acres-300,000 sq. ft. facility. We are also AAALAC accredited.

SaniDomes

Patented, State-of-the-Art Barrier Rooms...

All mice are housed in patented state of the art barrier rooms which contain each of the breeding and production groups.

Employees are assigned to individual SaniDomes and are prohibited from moving between the barriers.

Laboratory Animal Technicians work in a totally isolated environment including their restroom, changing room and lunchroom. Protective garments are autoclaved to maintain sterility.

All equipment or material entering the SaniDomes undergoes a process of sterilization

by either autoclave or chemical disinfection. Special environmental controls are in place for every aspect of the SaniDomes including light, noise, humidity,

positive air pressure and air exchange. Each barrier room has HEPA filters and specialized air blowers that replaces the air in each SaniDome once every 60 seconds.

All the equipment for cooling, heating and air-flow hangs from the ceiling to reduce the negative impacts of the vibration on the mice and produce a more stress free environment.

SCANTIBODIES Laboratory, Inc.

Animal Health Monitoring...

Scantibodies Laboratory Animal Health Monitoring aka SLAHM has two complimentary components:

1. Routine Health Monitoring component involves regular sampling of the general population to detect organisms chosen for screening.

2. Diagnostic Evaluation component is retrospective and focuses on the cause of clinical disease or death of the animals.

These two components encompass multiple disciplines including parasitology, microbiology, pathology, and serology.

Shipping

Experienced and Fully Compliant...

Experience with International shipment of live mice, temperature controlled vehicles, full compliance with NIH guidelines for shipment of animals as well as state of the art, filtered transport cages. Cleaned and sanitized trailers between every shipment.
